Professional Summary

IT Systems & Data Migration / Infrastructure Engineer

Dynamic Senior IT Professional and Founder of AxisCoreIT Group LLC, offering extensive expertise in designing, modernizing, and securing Windows-based infrastructure. Proven track record in orchestrating complex data migrations, enterprise storage solutions, and Microsoft 365 environment optimization. A specialist in automating administrative workflows and consolidating large-scale systems to drive operational excellence, cybersecurity resilience, and AI readiness.

Core Qualifications

- Windows 10/11 & Active Directory Administration
 - Microsoft Intune, Entra ID, & Endpoint Management
 - Enterprise Data Migration & Storage Architecture (NAS)
 - Microsoft 365, Outlook, & OneDrive Governance
 - PowerShell, Batch, & Bash Automation via SaltStack
 - Cybersecurity Strategy & AI-Ready Data Organization
-

Professional Experience

Founder / Principal Consultant | AxisCoreIT Group LLC

Hollister, CA | 2026 – Present

Spearhead IT consulting services focused on infrastructure modernization, cybersecurity, and operational efficiency.

- Executed comprehensive website modernization projects with a focus on accessibility and UX.
 - Conducted technical audits and developed infrastructure planning for systems integration.
 - Automated business processes and performed AI readiness assessments for diverse clients.
-

IT Systems & Knowledge Management Consultant (Contract)

Everyday Heroes Real Estate Team (EHRE) | 2026

Served as the lead consultant responsible for designing and organizing the firm's operational knowledge infrastructure, documentation systems, digital assets, and technical workflows to improve organizational consistency, onboarding, and long-term scalability.

Key Contributions

- Designed and implemented a structured digital knowledge management system supporting operational documentation, training materials, CRM resources, and organizational reference content.
- Developed standardized operational manuals, dictionaries, templates, and publication formats to establish repeatable business processes and improve internal consistency.
- Organized digital assets, repositories, branding resources, and technical documentation into a logical, maintainable directory structure for long-term organizational use.
- Created standardized publication cover templates used across operational manuals, training guides, reference dictionaries, and future organizational documentation.
- Established documentation standards, naming conventions, version control practices, and folder organization to improve information retrieval and reduce duplication.
- Produced onboarding resources and agent training documentation supporting consistent education of new team members.
- Developed operational artifacts supporting lead management, CRM workflows, business intelligence, and organizational process documentation.
- Managed migration, organization, and archival of project deliverables across cloud storage and removable media while maintaining document integrity and version consistency.
- Prepared documentation and structured information repositories to support future AI-assisted search, retrieval, and knowledge management initiatives.
- Created technical procedures for secure storage, backup workflows, USB media preparation, document preservation, and long-term digital asset management.
- Collaborated directly with leadership to translate business operations into documented, repeatable systems that support organizational growth and operational maturity.

Technologies

Google Workspace • Google Drive • Microsoft Office • PDF Publishing • Markdown • HTML • CSS • GitHub • VS Code • macOS • Windows • Digital Asset Management • Knowledge Management • Documentation Engineering • Information Architecture • AI-Ready Knowledge Systems

Systems Support Specialist II (Contract)

Gavilan College | 2025-2026

Educational Environment Support

- Managed 1,000+ Windows endpoints utilizing Microsoft Intune, Entra ID, and Defender.
 - Automated deployment and maintenance workflows with SaltStack and PowerShell.
 - Led server deployment and switching upgrades for large-scale network infrastructure projects.
 - Resolved complex OS and hardware issues while maintaining high uptime and security standards.
-

Technical Projects

Enterprise Endpoint Automation

- Engineered SaltStack configurations for automated driver installation and update management.
 - Standardized assets across the organization via custom PowerShell configuration scripts.
-

WPFW Website Accessibility & UX Modernization

- Developed a responsive interface prototype focusing on WCAG accessibility compliance.
 - Improved site navigation and mobile optimization through technical audit findings.
-

Technical Skills

- **OS & Infrastructure:** Windows Server/10/11, Linux, macOS, Active Directory, Entra ID, Intune.
 - **Automation & Security:** PowerShell, SaltStack, Python, Bash, Defender, Data Governance.
 - **Storage & Productivity:** NAS, Enterprise Storage, M365, Outlook, OneDrive, REST APIs.
-

Education

Bachelor of Science — Computer Science 2027

Associate of Arts - Digital Media 2022

Professional Strengths

- Complex data organization
- Systems integration
- Infrastructure modernization
- Automation
- Security-first thinking
- Strong analytical troubleshooting
- Independent project execution
- Excellent documentation
- Clear communication with technical and non-technical stakeholders

Relevant Experience

- Consolidated and managed enterprise endpoint environments across Windows 10/11, Microsoft Intune, Entra ID, Active Directory, Microsoft Defender, and Google Workspace, supporting large-scale device deployments, software lifecycle management, and secure access.
- Planned and executed operating system deployments, hardware refreshes, and data migration activities while preserving user productivity and minimizing downtime.
- Configured and maintained Microsoft Outlook and Microsoft 365 environments, including user profiles, account configuration, mailbox troubleshooting, PST import/export, profile recreation, and synchronization issues.
- Organized and migrated data between local storage, network shares, external drives, cloud storage, and user workstations while maintaining logical folder structures and validating data integrity.

- Assisted with infrastructure modernization projects including server deployment, network upgrades, endpoint standardization, and documentation of operational procedures.
- Developed PowerShell, Batch, and SaltStack automation to standardize system configuration, software installation, Windows updates, driver deployment, and asset management.
- Worked daily with Windows, macOS, and Linux systems to troubleshoot hardware, operating systems, storage, networking, permissions, and user access issues.
- Designed technology solutions through AxisCoreIT Group LLC focused on secure infrastructure, operational efficiency, AI readiness, data governance, and knowledge management.
- Currently researching and developing local-first computing architectures, secure storage strategies, self-hosted AI environments, retrieval systems, and structured knowledge repositories designed to minimize cloud dependency while maintaining strong security and long-term scalability.
- Experienced handling confidential organizational information with a disciplined approach to documentation, access control, backup verification, and security best practices. Familiar with the operational principles required for environments managing regulated or sensitive data.
